SUMMARY

Full stack developer with 3 years of experience on production web applications built with React, Node.js, Express and MySQL on AWS. For the last two and a half years I worked mainly on payment integrations for a membership platform: webhooks from five affiliate platforms, member access, refunds and reconciliation jobs. I work on a feature from the database up to the React screens, and I prefer finding the real cause of a production problem over patching the symptom.

SKILLS

Languages	JavaScript (ES6+), TypeScript, SQL, HTML, CSS
Frontend	React, Vite, Redux Toolkit, Material UI, React Router, Formik and Yup, Tailwind CSS, responsive layouts, design tokens, dark mode
Backend	Node.js, Express, Sequelize, REST APIs, JWT authentication, webhooks (IPN), cron jobs, queues (AWS SQS, BullMQ with Redis)
Database	MySQL and AWS Aurora, schema design, migrations, indexing, query tuning. Some PostgreSQL through Supabase
Cloud, DevOps	AWS (ECS, S3, SQS, CloudFront), Docker, GitHub Actions, PM2, Cloudflare R2
Tools	Git, GitHub, Postman, VS Code, npm and pnpm
AI features	Anthropic Claude API and OpenAI API, prompt design, routing cheap and strong models by step, agent steps stored as config, human approval before any real action
Claude Code	Daily driver for investigation, refactors and tests. Set up the repo guide (CLAUDE.md), pinned skill packs and an MCP server connection to the database. I review and test every change before it ships
Integrations	JVZoo, Digistore24, ClickBank, Explodely and CheckoutChamp APIs, OpenAI API, Anthropic Claude API, SendGrid, Slack webhooks

EXPERIENCE

Clicktrix, **Full Stack Developer** — Apr 2024 to Sep 2026 | Remote (NSW, Australia)

Profit Dashboard, a membership platform for affiliate marketing products. React, Node, Express, Sequelize, MySQL, AWS ECS.

- Built and maintained the payment webhook (IPN) handlers for JVZoo, Digistore24, ClickBank, Explodely and CheckoutChamp, covering product mapping, upsell access, refunds and reconciliation.
- Stopped duplicate sales from provider retries by adding a unique transaction id constraint, and added a secret token check to a postback endpoint that had been open to anyone.
- Added an alert for sales coming in for products the system did not recognise. It showed that one product's Digistore24 sales were being dropped silently. I fixed the cause and made sure every buyer who was affected got the account they paid for.
- Designed one refund and chargeback table shared by all payment platforms, with a unique key per platform, order and event type. It showed that refunds had been under counted, which gave the business more accurate numbers.
- Wrote reconciliation cron jobs that compare the vendor APIs with our database every five minutes and recover missed webhooks, plus a daily product mapping check and Slack alerts for failures.

- Traced a broken onboarding flow for webinar registrants to four separate causes, including a Sequelize model that was missing two columns and a sync job that was never scheduled. Fixed each one and tested the full flow in production.
- Built member dashboards, admin tools and the Training Hub lessons in React and Material UI, using shared design tokens. Led the Training Hub redesign and made the pages responsive with a dark theme.
- Worked on AVA, the in-app AI support assistant: moved it to a shared store so the chat survives page changes and tabs, and corrected its knowledge base after reviewing wrong answers.
- Built a buyer survey with an admin analytics page, a device and login analytics page, and an A/B test for a support card where each member keeps the same group.
- Built an order lookup API for another team, with API key authentication, rate limiting per key and no personal data in the response or the logs.
- Built and tested VSL, quiz and upsell funnel pages for several brands.
- Deployed with Docker on AWS ECS through GitHub Actions, including database migrations, and wrote the handover documentation for setup, deployment and open issues.

Vit Web Development Pvt. Ltd., **Software Developer** Aug 2023 to Apr 2024 | Indore

OTT video platform. React, JavaScript, HTML, CSS.

- Customised an OTT video player with Video.js, adding custom buttons and subtitle support.
- Built the movie listing pages and cards, and an admin panel with CRUD tables, pagination and loading states.
- Worked with the backend team on API integration so the screens showed live data, and made the UI work on both desktop and mobile.

PROJECTS

Ticket Desk, AI email support agent. Next.js 16 (React 19), TypeScript, Hono, BullMQ with Redis, Supabase Postgres, Docker.

- Support emails arrive through a webhook that checks the signature and saves each message once. A worker picks up the job, classifies the email and drafts a reply or a refund.
- Nothing is sent until a person approves it in the dashboard. Classification uses a small Claude model and the stronger one runs only for refund checks, which keeps the cost down.
- The agent steps (spam check, classify, look up the order, decide, draft) are rows in the database, not code, so prompts, thresholds and the step order are changed in the dashboard without a deploy.
- Per product API keys are encrypted with AES-256-GCM, every table has row level security, and migrations run before the app starts.
- Built with Claude Code. I set up the repo guide, pinned the project's skill packs and connected an MCP server to the database, then reviewed and tested every change.

ClickBank affiliate analytics dashboard. React, Material UI, Redux Toolkit, ApexCharts, Node, Express, Sequelize, MySQL.

- Sales, profitability, upsell rate and refund reports with Excel and CSV export, and role based access using CASL.
- Scheduled IMAP pipeline that reads support emails. Fixed duplicate entries by using the RFC Message-ID as the key, and fixed IMAP connection leaks and cron crashes.

Membership dashboards for several brands (Tinnito, Backyard Bounty, NeuroEnergizer, ANVIL). React pages built from shared components, with images served from Cloudflare R2.

EDUCATION AND REFERENCE

Bachelor of Engineering, Bansal Institute of Science and Technology, Bhopal, 2015 to 2019. **Higher Secondary**, City Central School, Bhind, 2015. **Certification**, Basics of Web Development, Masai School, 2022.
