SUMMARY

Full stack developer with 3 years of experience building production web applications with React, Node.js, Express and MySQL on AWS. For the last two and a half years I worked on a membership SaaS platform used by thousands of members, building React screens such as the member dashboard, Training Hub, onboarding guide and admin tools, and the Node.js APIs and background jobs behind them. I own features from the database table to the React screen, and I prefer finding the real cause of a problem over patching the symptom.

SKILLS

Frontend	React, Next.js, JavaScript (ES6+), TypeScript, Vite, Redux Toolkit, Material UI, React Router, Formik and Yup, Tailwind CSS, HTML, CSS, responsive layouts, design tokens, dark mode
Backend	Node.js, Express, Hono, REST APIs, JWT authentication, Sequelize, cron jobs, queues (AWS SQS, BullMQ with Redis), webhooks, SSE
Database	MySQL and AWS Aurora, schema design, migrations, indexing, query tuning, Redis cache, PostgreSQL through Supabase
Cloud, DevOps	AWS (ECS, S3, SQS, Lambda, CloudFront), Docker, GitHub Actions, PM2, Cloudflare R2
AI	OpenAI API and Anthropic Claude API, prompt design, AI content and video features, Claude Code with an MCP database connection (I review and test every change)
Tools	Git, GitHub, Postman, VS Code, npm and pnpm, Playwright for cross-browser checks, SendGrid, Slack

EXPERIENCE

Clicktrix, Full Stack Developer

Apr 2024 to Sep 2026 | Remote (NSW, Australia)

Profit Dashboard, a membership SaaS where members set up social media accounts, create AI videos and posts, and learn through guided training. React 18, Vite, Material UI, Redux Toolkit, Node.js, Express, Sequelize, MySQL, Redis, AWS.

- Second-largest contributor to the main codebase, working across the React frontend and the Node.js API: member dashboard, machine setup wizard, onboarding, profile, upgrades and admin panels.
- Built the First Week Guide, an in-app guide that walks new members through their first seven days: it points at the right control on each page, follows their live progress, resumes where they left off and works on phones and desktop.
- Led the Training Hub redesign into a course-player layout with a lesson sidebar, progress tracking, completion badges and a "next lesson" flow, fully responsive with a dark theme on shared design tokens.
- Worked on the AI content tools: the B-roll and AI talking-head video generator wizards, viral post packs, an AI caption generator and a post scheduler for Instagram, TikTok and Pinterest, plus the Node.js image overlay and slideshow video code behind them.
- Built the server-rendered landing pages for each niche and product, with several copy variations per product, and the AI stats panel that shows members how their content is performing.
- Worked on AVA, the in-app AI support assistant: moved it to a shared store so the chat survives page changes and tabs, added guided steps, and corrected its knowledge base after reviewing wrong answers.
- Built a buyer survey with an admin analytics page, a login and device analytics page, A/B tests where each member keeps the same group, and admin panels for notifications and content settings.
- Connected the platform to five sales platforms through webhooks so buyers get their account and upgrades automatically, with duplicate-safe processing, refund tracking, scheduled sync jobs and Slack alerts.
- Built an order lookup REST API for another team, with API key authentication, per-key rate limits and no personal data in the response or the logs.
- Traced a broken onboarding flow to four separate causes, including a Sequelize model missing two columns and a sync job that was never scheduled, fixed each one and tested the full flow in production.

- Deployed with Docker on AWS ECS through GitHub Actions, including database migrations, and wrote handover documentation for setup, deployment and open issues.

Vit Web Development Pvt. Ltd., Software Developer

Aug 2023 to Apr 2024 | Indore

OTT video streaming platform. React, JavaScript, HTML, CSS.

- Customised the video player with Video.js, adding custom controls and subtitle support.
- Built the movie listing pages and cards, and an admin panel with CRUD tables, pagination and loading states.
- Integrated the backend APIs so the screens showed live data, and made the UI work on both desktop and mobile.

PROJECTS

Ticket Desk, AI email support agent. Next.js 16 (React 19), TypeScript, Hono, BullMQ with Redis, Supabase Postgres, Docker.

- Support emails arrive through a signed webhook; a worker classifies each one and drafts a reply, and nothing is sent until a person approves it in the dashboard.
- Agent steps are stored as database rows, so prompts and step order change from the dashboard without a deploy. A small model classifies and a stronger one runs only where needed, to keep cost down.
- Encrypted API keys (AES-256-GCM), row level security on every table, and migrations that run before the app starts.

Sales analytics dashboard. React, Material UI, Redux Toolkit, ApexCharts, Node.js, Express, Sequelize, MySQL.

- Sales, profit, upsell and refund reports with charts, Excel and CSV export, and role based access using CASL.
- Scheduled IMAP pipeline for support emails; fixed duplicate entries using the email Message-ID as the key, and fixed connection leaks and cron crashes.

Brand member sites. React, Material UI, Cloudflare R2.

- Member dashboards and setup guides for several consumer brands, built from shared React components, with images served from Cloudflare R2.

EDUCATION AND REFERENCE

Bachelor of Engineering, Bansal Institute of Science and Technology, Bhopal, 2015 to 2019. Higher Secondary, City Central School, Bhind, 2015. Certification, Basics of Web Development, Masai School, 2022.
